

Spill Control and Countermeasures Plan

Nantucket Municipal Airport, Massachusetts

The Horsley Witten Group, Inc. (HW) completed a Spill Control and Countermeasures Plan (SPCCP) and an associated Emergency Response Action Plan (ERAP) on behalf of the Nantucket Municipal Airport. HW completed the plans in accordance with Federal Regulation 40 Code of Federal Regulations (CFR) 112 which provides guidance for the development of SPCCPs and established procedures and methods to prevent the discharge of oil into surface waters and adjoining shorelines.

Massachusetts state regulations (310 CMR 30.521(4)) require SPCCPs per Federal 40 CFR, with added requirements to comply with State 310 CMR 30 Hazardous Waste regulations. In the event of a release or threat of release of oil or hazardous materials, response actions are required in accordance with Massachusetts General Laws Chapter 21E, and the Massachusetts Contingency Plan 310 CMR 40.0000 (MCP) and 40 CFR 112.

HW completed policies and procedures for the operations of the Airport, including its terminal, maintenance and operations facilities, bulk fuel facility and private hangars. Significant components of regular operations include vehicle/cargo transfer and passenger transfer. Refueling of the bulk storage tanks, transfer of fuel planes and waste/lube oil transfer procedures were reviewed and HW then made recommendations. Normal maintenance facility activities include the maintenance of vessels and vessel support equipment, lube and waste oil transfer and general facility maintenance. Oil and hazardous material storage at the Airport includes fuel oil, lube oil, waste oil, paints, industrial chemicals, compressed gases, solvents and cleaning solutions. HW completed an inventory of all oil and other hazardous materials at all of these facilities, and established the proper response protocols in the event of a release.
