

Chepachet Village Integrated Water Management Plan

Town of Glocester, Rhode Island

Chepachet Village is an historic rural village in Glocester, Rhode Island, characterized by an eclectic mix of small-scale businesses situated in buildings that were constructed over the course of two centuries. The adjacent residential neighborhoods are equally diverse and create a truly classic New England village setting. As the village has continued to develop, environmental constraints have made it very challenging to manage wastewater and stormwater disposal in a manner that is conducive to environmental and public health.

The Horsley Witten Group, Inc. (HW) is currently under contract with the Town to identify opportunities for innovative neighborhood-scale wastewater and stormwater solutions that will promote the safe conveyance and effective treatment of stormwater and determine the optimal locations for wastewater disposal.

Services provided as part of this contract include:

- Community outreach;
- Field assessment;
- Feasibility analysis;
- Civil engineering design of all wastewater and stormwater management practices; and
- Construction oversight.
